

# ECOWOOD RETAIL DISPLAYS made with reclaimed wood

where every fixture has a story.

---

Our planet's resources can no longer  
be considered inexhaustible.

We would like to thank

## Aramark at Shenandoah National Park, Luray, VA

for their choice in using Ecowood Retail Displays made with reclaimed wood.

They are helping us to ease the demand being placed on our few remaining old-growth forests, while at the same time keeping demolition refuse out of our landfills. It makes a statement about their values and exposes their customers to the concept of reuse and conservation.

At Ecowood we create retail display systems with post-consumer, reclaimed lumber and eco-friendly materials, perfectly blending the beauty of real wood with the ethic of sustainable reuse.

Our goal is simple: to provide elegant efficient display options for our customers while reducing the use of new lumber.

The wood being used in this retail display was reclaimed from old ceiling joists in a warehouse that was deconstructed at the

Tracy Army Supply Depot, Tracy, CA.

---

We applaud their choice and thank them for the support and concern they have shown for our planet!
